

## ADAPTIVERB 1.1.0 VST3 Read-Me

Thank you for downloading **ADAPTIVERB 1.1.0!**

**If you're on a Mac, are using VST 3 and have created sessions using previous versions of ADAPTIVERB, please read this Read-Me carefully!**

Due to a bug in the Mac VST 3 version of ADAPTIVERB 1.0.0 and 1.0.1, the VST 3 Plug-In ID didn't match between Windows and Mac versions of the plugin. As a result, Windows sessions using the VST 3 plugin would not load correctly on Mac, and vice-versa.

We have corrected this issue in v1.1.0, so cross-platform session compatibility is now restored.

However, this unfortunately means that when loading Mac sessions created with v1.0.0 or 1.0.1 of the VST 3 ADAPTIVERB plugin, **the plugin will not be found and thus not recalled, breaking backward compatibility.**

As a work-around, the 1.1.0 installer for Mac contains a separate "Legacy VST3" installer. This installer will install a special version of ADAPTIVERB VST 3. This Legacy support version has the old, wrong plugin ID, so it allows loading VST3-based sessions made with earlier versions so you can save your plugin settings or bounce any tracks that use ADAPTIVERB.

**So if you're on a Mac, are using VST 3 and have created sessions using previous versions of ADAPTIVERB, please install *Zynaptiq ADAPTIVERB Legacy VST3 1.1 Plug-In.pkg***

Please accept our sincerest apologies for the inconvenience,  
the zynaptiq team.
